

Wave with Silent Gliss 3840

Wave –
A new contemporary drapery heading
system combining simplicity and style

Wave

With Wave, Silent Gliss has developed a unique drapery heading system that turns traditional curtains into a striking contemporary design element.

A special glider cord is contained within the curtain track and limits the extension of the curtain fabric, creating a smooth and continuous wave effect.

When opened, the Wave system encourages the curtains to stack back neatly and straight.

Smooth and round

As an alternative to traditional pinch, pencil pleat or goblet style headings, Wave offers a more contemporary curtain presentation.

It reflects the current trend towards smooth rounded forms and shapes in today's interior decoration.

The softer the selected fabric is, the smoother and more effective the wave appearance will be.

A bright, minimalist room featuring a large window with white curtains that have a subtle wave pattern. To the right, a white lounge chair with a curved backrest sits on a light-colored wooden floor. To the left, a small white table holds a vase with purple flowers and a vase with white flowers. The ceiling is white with a decorative, ornate border.

What makes Wave so unique?

- When completely closed or part open, the curtains offer a smooth, continuous wave effect.
- Significantly easier curtain make-up compared to today's available S-Fold solutions.
- The Wave glider-cord is not visible when the curtain is fully closed.
- Sewn along the top of the curtain, the pockets are in exactly the right position for our track system.
- When taken down, the curtain is flat for easy cleaning.

Technical Information

Wave is available with the following Silent Gliss curtain track systems:

- Hand operated curtain track: Silent Gliss 2191 and 6010
- Cord operated curtain track: Silent Gliss 3840
- Cubicle and room divider system: Silent Gliss 6100
- Motorized curtain track: Silent Gliss 5100, 5150, 5300, 5400 and 5420

The Wave curtain heading system is comprised of three basic elements:

1. Special glider-cords 6345 and 6346

Available with either 2.4" (60mm) or 3.1" (80mm) permanently fixed spacing.

2. Curtain tape 6349 and hemming tape 6363

Flat 75mm tape (6349) designed to hang perfectly below the track and special iron-on hemming tape (6363) for use between the top fabric hem for a smooth appearance.

3. Curtain hook 3582

The fullness and wave depth of the curtain depends on the selected glider cord and the applied spacing between the curtain hooks.

Using the 2.4" (60mm) glider cord with 3.9" hook spacing gives the tightest waves, whereas the 3.1" (80mm) glider cord with 6.2" hook spacing gives the most open, flowing heading.

Glider-Cord Spacing Guide	* Curtain Hook Spacing Guide	* Fabric length in relation to track length	* Wave Depth
		1.7	
		2.0	
		1.75	
		2.0	

*These figures are approximate and in practice they may vary by + or - 5%.

Silent Gliss is the leading global supplier of motorized and manual curtain and blind systems in the high quality market. We offer our customers the very best in terms of quality, design, technology, service and individuality. Our core competence is innovation – inspired and driven by customer needs. A team of highly skilled and experienced professionals works on new developments and the improvement of existing products. With committed customer support teams Silent Gliss provides an extensive range of services including technical advice, fitting services and maintenance all around the world.
